Ivan Shekhavtsov

Product and systems analyst

Student of the IT specialist program at Sirius University. I build AI products and automation: I talk to people, describe scenarios and requirements, build prototypes and take them to launch together with a team. Ready to work remotely, about 20 hours a week.

Experience

ML specialist and project manager Since September 2026

Talent and Success Foundation, Center for Analytics and Process Optimization

- We work on several projects: bringing AI into medicine and automating routine tasks.
- Studied the structure and data of the hospital information system and the documentation process.
- In a team of three I combine ML work with planning and coordination, an internal startup format.

Team lead and analyst July - September 2026

Yandex Cloud, project internship, Virtual Patient project

- Led a team of three: calls with the customer, tasks for the team, requirements, CJM, user personas and BPMN.
- Designed the service screens in Figma for students and teachers.
- Tested the build and improved the patient cards, helped with prompts for the OCEAN profile.

Systems engineer, project and education practice June 30 - July 24, 2025

Sirius University, Scientific Center for Information Technologies and AI

- Built the infrastructure of a training branch from scratch on Russian software: ISP VMmanager, Astra Linux SE 1.8 and a MikroTik CHR router.
- Split the network into four VLANs, set up DHCP, protected SSH access on port 2025 and configuration backups.
- Worked in Scrum with a mentor from the Astra company. Could not deploy ALD Pro and wrote up the reason in the report.

Business assistant and operations lead Since May 2025

E-commerce company (children's goods), IP Zhurova

- Automated flyer tracking in warehouses with a Telegram bot (work became about 4 times faster) and built an employee onboarding system.
- Set up and maintain servers, VPN, access to marketplace accounts and corporate accounts.
- Built departments, for example SMM (four people) and logistics: organized and automated processes, wrote regulations, handled hiring.
- Write briefs for designers, lawyers and accountants.

Team lead of hackathon organizers 2025

Sirius University

- Ran the international Young Scientists Hackathon with participants from five countries.
- Organized a hackathon supported by the Russian Ministry of Emergency Situations, a team of 5-7: cases, judging, venue, partners.

Developer intern January - April 2024

VR Laboratory, Sirius federal territory

- Made 3D train models for a train driver simulator.
- Turned the supervisor's spoken tasks into requirements and metrics on my own and agreed iterations with Unity developers.

Projects

Virtual Patient 2026

A clinical thinking simulator: a medical student talks to an LLM playing the patient

112 Dispatcher Trainer 2026

A dispatcher workstation where a beginner practices decisions on emergency calls

Audit of client acquisition for Alfa Business 2026

Alfa-Future contest: we reviewed how the bank attracts new clients today and proposed a First Turnover mode

A competition consulting case: we compared ways to attract clients and proposed improvements. The effect was not measured.

Support Telegram bot for business 2025-2026

One bot for marketplace buyers: manuals, warranty, support and a gift for a review

Automated onboarding platform 2026

A site that takes a new employee from a form to granted access in about two hours

Onboarding became structured and transparent: training, tasks and access in one place. By my estimate it became about 4-5 times faster.

Secure IT infrastructure on Russian software 2025

A branch network of four VLANs: virtualization, a router and protected access

E-commerce operations system 2025-2026

Not a single script but a whole loop: bots, onboarding, dashboards, servers and a team

The flyer-tracking bot sped the work up about 4 times: no more manual entry at warehouses.

3D modeling 2024

Trains, a bridge, a tunnel and a depot for a VR simulator, plus a part in KOMPAS-3D

FinanceTracker in Qt 2026

A finance tracker in C++ with charts and markets

Online bank in Bash 2023-2025

A learning bank: accounts and operations in a Bash database, charts in Python

Education

Sirius University Since 2024

Design, development and management of complex information systems. Full-time, 3rd year.

Financial University under the Government of the Russian Federation Since 2026

09.03.03 Applied Informatics, Applied information systems in economics and finance. Part-time.

Computer Academy STEP 2020 - 2023

Software development

Skills

Product and processes: CJM and user stories, User personas and interviews, BPMN and UML, Requirements and specs, Roadmap, Agile and Scrum

Analytics and data: SQL and PostgreSQL, Python and pandas, Power BI and Excel, Metrics and funnels, Unit economics

AI and LLM: Prompt engineering, LLM testing, LangChain and LangGraph, YandexGPT and Claude

Development: Python and FastAPI, Telegram Bot API, Docker and VPS, React, C++ and Qt, Node.js and API integrations, Linux, networks and virtualization

Team and tools: Team leadership, Hiring and reporting, Figma and Miro, Yandex Tracker and Notion, KOMPAS-3D, Blender and 3D

Achievements

- **3 times** winner of the all-Russian contest Bolshaya Peremena
- **5 countries** participants of Young Scientists Hackathon 2025, which I led as team lead of the organizers
- **up to 7** people in the teams I led: hackathons, an SMM department, project groups
- **350+** hours of volunteering
- **10+** events and about 1000 people reached as a VK ambassador in 2024-2025
- **Grants** as part of a team wrote applications for Rosmolodezh grants that received support
- **Youth festivals** took part in the World Festival of Youth 2024 at Sirius and the youth festival 2026 in Yekaterinburg
- **Paper** writing a review paper with my scientific supervisor on neural differential equations in chemical technology
